# **Development of Novel Nanostructured Conducting Polypyrrole Fibres**

A thesis submitted in fulfilment of the  
requirements for the award of the degree

DOCTOR OF PHILOSOPHY

From

UNIVERSITY OF WOLLONGONG

by

JAVAD FOROUGHI

(BSc & MSc Textile Engineering)

Intelligent Polymer Research Institute

Faculty of Engineering

September 2009

*To my parents for their endless love.*

*To my country IRAN*

# CERTIFICATION

I, *Javad Foroughi*, declare that this thesis, submitted in fulfilment of the requirements for the award of *Doctor of Philosophy*, in the *Faculty of Engineering*, University of Wollongong, is wholly my own work unless otherwise referenced or acknowledged. The document has not been submitted for qualifications at any other academic institution.

Javad Foroughi

September 2009

## ACKNOWLEDGEMENTS

I would like to thank my supervisors Prof. Gordon Wallace and Prof. Geoff Spinks for supervision throughout this work. Their guidance and support throughout the course of this project will not be forgotten in my life.

I greatly appreciate to Prof. Leon Kane-Maguire for his guidance, advice and for his careful proof reading and help on the first draft of this thesis.

I would also like to thank Prof. Ray Baughman and Dr. Mikhail Kozlov from Nanotech Institute, University of Texas at Dallas. Also the Australian Research Network for Advanced Materials (ARNAM) for financial support for this visit.

My colleagues and friends at Intelligent Polymer Research have offered help and support over the past 3 years that I have been a part of that group. In particular, I would like to thank Dr. Philip Whitten, Prof. Chee O Too, Prof. Peter Innis, Dr. Joe Razal, Dr. Jun Chen, Dr. Jakub Mazurkiewicz, Dr. Scott McGovern, Adrian Gestos, Dr. Johana Mbere, and Dr. Grant Mathieson for their unforgotten help in the laboratory. I would like to thank Prof. Rian Dippenaar for his support during my study.

The financial support provided by the Australian Research Council in the form of an Australian Postgraduate Award and by Prof. Gordon Wallace for my PhD scholarship is gratefully acknowledged.

Finally I am grateful to my family in IRAN who has provided continued support throughout this study and indeed for my entire life.

## Abstract:

Polypyrrole (PPy) as a conducting polymer has potential applications in electrical and electronic devices because of its high electrical conductivity, environmental stability and redox activity. There have been many attempts to endow electrically PPy with processibility. Although some success has been achieved *via* synthesising soluble PPy, there have remained difficulties to fabricate this material through fibre spinning due to its low molecular weight and poor mechanical properties. Prior to this thesis, there was no report of the production of PPy fibres. This project therefore aimed to produce novel “*polypyrrole fibres via the development of nanostructured conducting polypyrrole*” by fibre spinning of PPy and to investigate the formed fibres for applications such as actuators, e-textiles, batteries, sensors and biomedical areas.

As a result of the research conducted for this thesis, polypyrrole fibres have been produced for the first time. The initial wet-spinning process was enabled by the use of highly soluble non-functionalised PPy using di-(2-ethylhexyl)sulfosuccinate (DEHS) dopant, and the generation of a spinning solution of the PPy-DEHS in dichloroacetic acid (DCAA) solvent. Subsequent work sought to improve the properties of these first generation PPy-DEHS fibres by increasing the molecular weight, addition of carbon nanotubes (CNTs) and addition of a supporting polymer (alginate). The use of the host polymer also enabled a new fibre spinning method to be developed that included an *in situ* polymerization process. Carbon nanotubes additions were achieved in two ways: firstly by adding small amounts of CNTs to the spinning dope; and secondly, a completely novel approach was developed whereby PPy was polymerized onto and into a CNT yarn.

Each of the methods used to generate PPy fibres gave different performances in terms of mechanical strength / stiffness; electrical conductivity and electroactivity. Generally, it was found that adding of carbon nanotubes to the PPy improved the strength, stiffness and conductivity. The highest conductivity and Young's modulus of any conducting polymer based fibre reported to date was obtained by incorporating PPy into a CNT yarn. The more robust fibres were assessed as mechanical actuators and a maximum strain of 2.5% was produced from the high molecular weight PPy-DEHS fibre.

In summary, a range of novel fibrous PPy materials have been developed for possible use in applications such as actuators, sensors, artificial muscles, batteries and biomedical applications. The main aim of the thesis was to develop methods for continuous production of doped PPy fibres. This aim was successfully completed with a variety of different fibre compositions and properties demonstrated using a range of different fibre processing methods.

# ABBREVIATIONS

A	Ampere
A <sup>-</sup>	Anion
AC	Alternating current
ACN	Acetonitrile
Ag/Ag <sup>+</sup>	Silver/silver ion reference electrode
Ag/AgCl	Silver/silver chloride reference electrode
BMI.BF <sub>4</sub>	1-Butyl-3-methyl-imidazolium tetrafluoroborate
C	Coulomb

Figure 7.11:	191
Stress-strain curves obtained from tensile testing of chemically and electrochemically prepared two-ply PPy-CNT and pristine CNT yarns.	
Figure 7.12:	192
Cyclic voltammograms of pristine CNT yarn. Potential was scanned between -0.9 and +0.7 V (vs. Ag/Ag <sup>+</sup> ) in 0.10 M Li.TFSI in PC at 100 mVs <sup>-1</sup> .	
Figure 7.13:	193
Cyclic voltammograms of chemically prepared PPy-CNT yarn. Potential was scanned between -0.9 and +0.7 V (vs. Ag/Ag <sup>+</sup> ) in 0.10 M Li.TFSI in PC at 100 mVs <sup>-1</sup> .	
Figure 7.14:	193
Cyclic voltammograms of electrochemically prepared PPy-CNT yarn. Potential was scanned between -0.9 and +0.7 V (vs. Ag/Ag <sup>+</sup> ) in 0.10 M Li.TFSI in PC at 100 mVs <sup>-1</sup> .	
Figure 7.15:	194
Cyclic voltammograms of chemically prepared PPy-CNT yarn. Potential was scanned between -0.9 and +0.7 V (vs. Ag/Ag <sup>+</sup> ) in 1.0 M NaCl aqueous at 100 mVs <sup>-1</sup> .	
Figure 7.16:	194
Cyclic voltammograms of electrochemically prepared PPy-CNT yarn. Potential was scanned between -0.9 and +0.7 V (vs. Ag/Ag <sup>+</sup> ) in 1.0 M NaCl aqueous at 100 mVs <sup>-1</sup> .	

## Chapter 8

Figure 8.1:	204
Correlation between electrical conductivity and Young's modulus of as-prepared PPy materials. Filled circles represent fibres based on CNT yarns (a): chemically prepared PPy-CNT yarn (b): electrochemically prepared PPy-CNT yarn. Filled squares are wet-	

spun fibres from soluble PPy-DEHS. Filled diamonds represent the *in situ* reactive spinning using alginate as a host polymer. The points shown as a filled and unfilled triangles represents the electrochemically prepared PPy-DEHS film and PANi-CNT fibre, respectively (added for comparison).

Figure 8.2: **206**

Correlation between conductivity and electroactivity (anodic charge) of as-prepared PPy materials. Refer to Figure 8.1 for an explanation of symbols.

Figure 8.3: **208**

Correlation between electroactivity (anodic charge) and modulus of as-prepared PPy materials. Refer to Figure 8.1 for an explanation of symbols.

## **Tables**

Table 4.1: **83**

Effect of coagulation bath on fibre spinning.

Table 4.2: **88**

Mechanical properties PPy-DEHS and PPy-DEHS/CNT fibres.

Table 4.3: **92**

Effect of temperature, co-solvent and APS oxidant concentration on the properties of the PPy-DEHS product.

Table 4.4: **101**

Ratio of integrated absorption intensities for standard and high molecular weight PPy-DEHS powders.

Table 4.5: **104**

Comparison of elemental analyses for PPy-DEHS samples in their powder form and after fibre spinning.

Table 5.1: **122**

Comparison of the elemental analysis of PPy-DEHS as (i) chemically polymerized powder, (ii) cast film, and (iii) electropolymerized film.

Table 5.2: **126**

Ratio of integrated absorption intensities of Raman bands in PPy samples.

Table 5.3: **128**

Ratio of integrated absorption intensities of chemically and electrochemically prepared PPy-DEHS.

Table 6.1: 165

Ratio of integrated absorption intensities of Raman bands in PPy-Alg fibre.

Table 6.2: 168

Effect of the oxidant/dopant on electrical conductivity of as-spun fibres.

## **Schemes**

Scheme 3.1: 59

Schematic of interaction between DEHS and oxidised polypyrrole

Scheme 6.1: 161

Schematic of interaction between DEHS and oxidised polypyrrole.

Scheme 6.2: 162

Chemical structure of Alginate composed of D-mannuronic acid (**M**) and linked L-guluronic acid (**G**) residues.

<b>CHAPTER ONE</b>	<b>1</b>
--------------------	----------

***Introduction***

1.1 Motivation	2
1.2 Introduction	3
1.2.1 Inherently Conducting Polymers	3
1.2.2 Polyaniline	6
1.2.3 Polypyrrole	9
1.3 Synthesis of Polypyrrole	14
1.3.1 Electrochemical Polymerization of Pyrrole	14
1.3.2 Chemical Polymerization of Pyrrole	14
1.3.2.1 Synthesis of Soluble Polypyrrole	16
1.3.2.1.1 Soluble PPy-DBSA	16
1.3.2.1.2 Soluble PPy with various Functional Dopants	19

1.3.2.1.3 Soluble Polypyrrole with Polymeric Co-dopant	20
1.3.2.1.4 Water Soluble Polypyrrole	21
1.4 Applications of Soluble Polypyrrole	22
1.5 Fibre Spinning	23
1.5.1 Spinning Conducting Polymers	26
1.5.1.1 Spinning of Polyaniline Fibres	26
1.5.1.1.1 Two-Step Spinning of Polyaniline Fibres	26
1.5.1.1.2 One-Step Spinning of Polyaniline Fibres	27
1.6 Aims and Organization of This Thesis	30
1.7 References	32

## **CHAPTER TWO** 38

### ***Experimental***

2.1. Introduction	39
2.2. Purification of Polypyrrole Polymers	39
2.2.1. Dialysis	39
2.2.2. Centrifugation	39
2.3 Dynamic Light Scattering (DLS)	40
2.4 Elemental Analyses	44
2.5 Viscometry	44
2.5.1 Intrinsic Viscosity	44
2.5.2 Shear Viscometry	45
2.6 UV-Visible-Near Infrared Spectroscopy	45
2.7 Fourier Transform Infrared (FTIR) Spectroscopy	46
2.8 Raman Spectroscopy	47
2.9 Conductivity Measurements	48
2.10 Dynamic Mechanical Analysis	50
2.10.1 Stress-Strain	50

2.10.2 Viscoelasticity Test	51
2.11 Cyclic Voltammetry	52
2.12 Thermal Analyses	53
2.13 Scanning Electron Microscopy	53
2.14 Transmission Electron Microscopy	54
2.15 Electrochemical Actuation of Polypyrrole	54
2.16 X-ray Diffraction	55
2.17 References	56

## **CHAPTER THREE** 57

### ***Production of Polypyrrole Fibres from Soluble Polypyrrole***

3.1 Introduction	58
3.2 Experimental	59
3.2.1 Materials	59
3.2.2 Characterization Techniques	59
3.2.3 Synthesis of Soluble Polypyrrole	61
3.2.4 Preparation of Fibre Spinning Solution	61
3.2.5 Formation of PPy-DEHS Fibres	62
3.3 Results and Discussion	63
3.3.1 Characterization of Fibre Spinning Solution	63
3.3.1.1 UV-Vis /NIR Spectroscopy	64
3.3.1.2 Dynamic Light Scattering	65
3.3.2 Fibre Spinning	66
3.3.3 Characterization of As-Spun PPy-DEHS Fibre	67
3.3.3.1 Morphology	67
3.3.3.2 Mechanical Properties of PPY-DEHS Fibre	68
3.3.3.3 Electrical and Electrochemical Properties	69
3.4 Conclusions	71

3.5 References	72
----------------	----

## CHAPTER FOUR 73

### *Production of High Performance Polypyrrole Fibres*

4.1 Introduction	74
4.1.1 PPy-DEHS/CNT Composite Fibre	74
4.2.2 High Molecular Weight Polypyrrole Synthesis	75
4.2 Experimental	76
4.2.1 Materials	76
4.1.2 High Performance (High Molecular Weight) PPy-DEHS Fibres	76
4.2.3 Preparation of Spinning Solutions	77
(i) PPy-DEHS/CNT Solutions	77
(ii) High Molecular Weight PPy-DEHS Solutions	77
4.2.3 Fibre Spinning	78
(i) PPy-DEHS/CNT	78
(ii) High Molecular Weight PPy-DEHS	78
4.3 Results and Discussion	79
4.3.1 Characterization of PPy-DEHS/CNT Spinning Solutions	79
4.3.1.1 TEM micrographs of spinning solution	79
4.3.1.2 Dynamic Light Scattering	81
4.3.1.3 UV-Vis/NIR Spectra	81
4.3.2 Characterization of Spun PPy-DEHS/CNT Fibre	82
4.3.2.1 Fibre Spinning	83
4.3.2.2 Morphology	83
4.3.2.3 Raman Spectra of PPy-DEHS/CNT Fibres	86
4.3.2.4 Electrical Properties of PPy-DEHS/CNT Fibre	87
4.3.2.5 Mechanical Properties of PPy-DEHS/CNT Fibre	88
4.3.2.6 Thermal Properties of PPy-DEHS/CNT Fibre	89

4.3.3 Production of high Molecular Weight PPy-DEHS Powders and Fibres	90
4.3.3.1 Synthesis of High Molecular Weight PPy-DEHS Powders	90
Influence of [APS oxidant]/ [pyrrole monomer] Ratio	91
Influence of Polymerization Temperature	91
Influence of Ethanol Co-solvent	92
4.3.3.2 Intrinsic Viscosity of PPy-DEHS	95
4.3.3.3 Dynamic Light Scattering	98
4.3.3.4 UV-Vis/NIR Spectra	99
4.3.3.5 FTIR Spectra	100
4.3.3.6 Thermal Properties of PPy-DEHS	102
4.3.3.7 X-ray Diffraction of PPy-DEHS Powders	103
4.3.3.8 Elemental Analyses of PPy-DEHS	104
4.3.4 Production of High Performance PPy-DEHS Fibre	105
4.3.4.1 Viscometry of PPy-DEHS Spinning Solution	105
4.3.4.2 Morphology of Spun PPy-DEHS Fibre	106
4.3.4.3 Mechanical Properties of High Molecular Weight PPy-DEHS Fibre	108
4.3.4.3.1 Drawing of As-Spun PPy Fibre	108
4.3.4.3.2 Mechanical Testing of High Molecular Weight PPy Fibre	110
4.3.4.4 Electrical and Electrochemical Properties of High Molecular Weight PPy Fibre	111
4.4 Conclusions	113
4.4.1 PPy-DEHS/CNT Fibres	113
4.4.2 High Molecular Weight PPy-DEHS Fibres	113
4.5 References	114

## **CHAPTER FIVE** 116

### ***Electrochemically Polymerized DEHS Dope Polypyrrole***

5.1 Introduction	117
5.2 Experimental	119
5.2.1 Materials	119
5.2.2. Preparation of Electropolymerized PPy-DEHS Film	119
5.2.3 Preparation of Chemically Polymerized PPy-DEHS Films	119
5.3 Characterization of PPy-DEHS Films	119
5.3.1 UV-Vis/NIR Spectroscopy	120
5.3.2 Elemental Analysis of PPy-DEHS Materials	121
5.3.3 Thermal Properties of PPy-DEHS Powder and Films	122
5.3.4 Raman Spectroscopy	123
5.3.5 FT-IR Spectroscopy	126
5.3.6 Morphology of PPy Powder and Films	129
5.3.7 Mechanical Properties of PPy-DEHS Films	131
5.3.8 Electrochemical Properties of PPy-DEHS Materials	133
5.3.9 Electromechanical Actuation of PPy-DEHS Films	136
5.4 Conclusions	139
5.5 References	140

## **CHAPTER SIX** 142

### ***Production of Polypyrrole Alginate Fibres***

6.1 Introduction	143
6.1.1 Production of PPy/Alg Bicomponent Fibre	144
6.1.2 <i>In Situ</i> Spinning and Polymerization of PPy-Alg Fibre	144
6.1.3 <i>In Situ</i> Spinning and Polymerization of PPy-Alg-CNT Fibre	145
6.2 Experimental	145
6.2.1 Materials	145

6.2.2 Synthesis of Polypyrrole Colloidal Dispersion	145
6.2.3 Preparation of Spinning Solution	146
6.2.3.1 Polypyrrole-Alginate Spinning Solution	146
6.2.3.2 Alginate-Pyrrole Spinning Solution	146
6.2.3.3 Alginate-Pyrrole-CNT Spinning Solution	147
6.2.4.1 PPy/Alg Bicomponent Fibre	147
6.2.4 Fibre Spinning	147
6.2.4.2 PPy-Alg and PPy-Alg-CNT Fibres	148
6.3 Results and Discussion	149
6.3.1 Characterization of PPy-Alg Bicomponent Fibres	149
6.3.1.1 Dynamic Light Scattering	149
6.3.1.2 Viscometry of Spinning Solution	150
6.3.1.3 UV-Vis/NIR Spectra of Spinning Solution	150
6.3.1.4 Production of As-spun PPy-Alg Bicomponent Fibres	151
6.3.1.5 Morphology of As-spun PPy-Alg Bicomponent Fibres	151
6.3.1.6 Mechanical Properties of PPy-Alg Bicomponent Fibre	153
6.3.1.7 Electrical Conductivity of PPy-Alg Bicomponent Fibres	154
6.3.2 Characterization of PPy-Alg and PPy-Alg-CNT Fibres	154
6.3.2.1 Viscometry of Spinning Solution	154
6.3.2.2 Production of As-spun PPy-Alg and PPy-Alg-CNT Fibres	155
6.3.2.3 UV-Vis/NIR Spectra of As-spun PPy-Alg Fibre	155
6.3.2.4 Morphology of As-spun PPy-Alg and PPy-Alg-CNT Fibres	157
6.3.2.5 Raman Spectroscopy of PPy-Alg-CNT Fibres	161
6.3.2.5 Mechanical Properties of As-spun PPy-Alg and PPy-Alg-CNT Fibres	166
6.3.2.9 Electrical and Electrochemical Properties of As-spun Fibres	168
6.4 Conclusions	172
6.4.1 PPy-Alg Bicomponent Fibres	172
6.4.2 PPy-Alg and PPy-Alg-CNT Fibres	172

6.5 References	174
----------------	-----

## **CHAPTER SEVEN** 175

### ***Development of Polypyrrole-Carbon Nanotube Yarn***

7.1 Introduction	176
7.2.2 Spinning of Carbon Nanotubes Yarn	178
7.2.1 Materials	178
7.2 Experimental	178
7.2.3 Preparation of PPy-CNT Yarn	180
7.2.4 Electrochemical Preparation of PPy-CNT Yarn	182
7.3 Results and Discussion	183
7.3.1 Characterization of PPy-CNT Yarn	183
7.3.1.1 Morphology	183
7.3.1.2 Raman Spectra of PPy-CNT Yarn	187
7.3.1.3 Mechanical Properties of PPy-CNT Yarn	189
7.3.1.4 Electrical and Electrochemical Properties of PPy-CNT Yarn	191
7.4 Conclusion	195
7.5 References	196

## **CHAPTER EIGHT** 197

### ***General Conclusions***

8.1 Background	198
8.2 Conclusions from Thesis	199
8.3 Comparison of Fibre properties	203
8.4 Fibre Actuators	207
8.5 Overall Conclusions and Recommendations for Future Work	208
8.6 References	210
